

Your doctor has ordered the drug carboplatin to help treat your illness. The drug is given by injection into a vein.

This medication is used to treat:

- ovarian carcinoma

This medication is sometimes prescribed for other uses; ask your doctor or pharmacist for more information.

Carboplatin is in a class of drugs known as platinum-containing compounds; it slows or stops the growth of cancer cells in your body. The length of treatment depends on the types of drugs you are taking, how well your body responds to them, and the type of cancer you have.

Other uses for this medicine [Return to top](#)

Carboplatin also is used to treat certain types of lung cancer, testicular cancer, head and neck cancer, Wilms' tumor, brain tumors, bladder cancer, and retinoblastoma. Talk to your doctor about the possible risks of using this drug for your condition.
